About this poll

This report summarises the results of a fortnightly omnibus conducted by Essential Research with data provided by Qualtrics. The survey was conducted online from 14th to 19th October 2020 and is based on 1,082 respondents.

The methodology used to carry out this research is described in the appendix at the end of the report.

Note that due to rounding, not all tables necessarily total 100% and subtotals may also vary.

Appendix: Methodology, margin of error and professional standards

The data gathered for this report is gathered from a fortnightly online omnibus conducted by Qualtrics.

Every two weeks, the team at Essential considers issues that are topical, and a series of questions are devised to put to the Australian public. Some questions are repeated regularly (such as political preference and leadership approval), while others are unique to each week and reflect current media and social issues.

The response rate varies each week, but usually delivers 1000+ interviews. In theory, with a sample of this size, there is 95 per cent certainty that the results are within 3 percentage points of what they would be if the entire population had been polled. However, this assumes random sampling, which, because of non-response and less than 100% population coverage cannot be achieved in practice. Furthermore, there are other possible sources of error in all polls including question wording and question order, interviewer bias (for telephone and face-to-face polls), response errors and weighting.

The online omnibus is live from the Wednesday night and closed on the following Sunday. Incentives are offered to participants. Essential Research uses the Statistical Package for the Social Sciences (SPSS) software to analyse the data. The data is weighted against Australian Bureau of Statistics (ABS) data.

All Essential Research staff hold Australian Market and Social Research Society (AMSRS) membership and are bound by professional codes of behaviour.
